

ABSTRACT

Collapsible and portable seating device and method of using the device is
5 provided with telescoping legs, a cane-function and an umbrella to provide protection
from sun, rain and snow. The telescoping legs allow for adjustments for height and
sturdiness on uneven contours such as a slope or hill. An umbrella connection on the
handle allows for unlimited positioning of the umbrella and folds neatly with the legs
when not in use. There are no loose parts in the seating device that has a weight of less
10 than approximately 6 pounds, is easily set-up and folded to a collapsed condition for
storage or use as a cane.
